Introduction: Football Tournament Management System is a software where a tournament can be managed .Players can register themselves under a team .The aim of the project is to maintain records and make analysis based on reports generated . This system can store details of players ,teams , referee,venue and scores . This Project is based on mainly Database and Java.

Motivation and Objective: We have tried to figure it out in a short time. Although we have a plan to work with this in future. We want to make a website for this project where anyone can maintain a tournament by registering.

Query for Value Update, Setting Constraints and Rules

"UPDATE Players SET

Position=?,TotalGoal=?,HoursPlayed=?,YellowCards=?,RedCards=?,TeamName=?"+" where
Playerid="

"UPDATE Referee SET RefereeName=?,refereeCountry=?,MatchOperated=?"

+ " where Refereeid="+refid.getText();

UPDATE Teams SET

teamName=?,homeGround=?,homeWin=?,homeLoss=?,awayWin=?,awayLoss=?,totalWin=?,totalLo
se=?"

+ " where teamId="+teamid.getText();

Query for the Join and Binary Operation (like Union,except) you have used

SELECT

MatchSchedule.Matchid,MatchSchedule.HomeTeam,MatchSchedule.AwayTeam,MatchSchedule.Datee,MatchSchedule.RefereeName,MatchSchedule.venue,Scoree.Hometeamscore,Scoree.Awayteamscore FROM MatchSchedule Inner Join Scoree ON MatchSchedule.Matchid=Scoree.Matchid;
